

Smart Cities Solutions

Powered
by sun and
wind energy

Smart IoT Platform OMNILED 07 / 035

Smart IoT Lamppost powered by wind and solar with integrated energy storage and grid connection that enables multiple integrated applications.

With our solution its possible to transform a simple street light into a carbon neutral device that can be used for multiple IoT purposes.

The grid connected unit first uses the available renewable energy. Only if the batteries are depleted it will consume part of the energy from the grid.

With this, Omniflow systems achieve dramatic savings >90% compared with regular lighting and even >60% with standard LED.

Some projects can be done Off-Grid. Please contact us for site evaluation.

OMNICHARGER

Integrated EV Charger up to 22 kW
QR code payment system

The Omniflow Smart Luminaire is an innovative solution that transforms existing street lights into smart poles, bringing intelligence and sustainability to urban spaces without replacing infrastructure. Using renewable energy, it integrates IoT technology to boost energy

efficiency and reduce costs while expanding city connectivity. This versatile luminaire supports multiple applications, from enhancing public safety to monitoring environmental conditions and gathering urban data, making it ideal for the smart city of tomorrow.

OMNI CHARGER

Our sustainable Smart luminaire powered by wind and solar with a built-in EV Charging Station is the perfect innovative product to facilitate the availability of charging points. All the elements are located inside the luminaire making it much easier to deploy using existing standard poles and power cables.

By adopting this technology, a city with 80,000 street lights could convert 25% into Omniflow Smart Poles, enabling over 90% energy savings and supporting up to 650 EV chargers at 7kW or 1,500 at 3kW.

OMNICONNECT

Digital Twin Urban Platform

IoT Monitoring and Control

OmniConnect is the Omniflow's platform that gives you full visibility and control over your smart urban infrastructure.

Through a real-time digital twin, you can monitor, manage, and optimize the performance of all Omniflow devices from a single, intuitive interface.

Designed for **seamless integration**, OmniConnect allows you to:

- Visualize your devices' status and key metrics in real-time.
- Remotely control and configure device settings.
- Analyze data to improve operational efficiency and sustainability.

With **AI-embedded driven services**, OmniConnect provides:

- **Cost Savings:** Reduce operational expenses by monitoring and maintaining devices remotely.
- **Improved Decision-Making:** AI-powered insights help you make smarter, faster decisions.
- **Simplified Maintenance:** Quickly detect and resolve issues before they escalate, reducing downtime.

Take full control of your smart urban equipment with OmniConnect and drive efficiency, sustainability, and innovation through the power of AI.

Smart City solutions

Our Omniflow solution is an integrated Smart Lamp Post powered by wind and solar with integrated battery storage. It transforms a regular street light into a sustainable smart infrastructure capable of housing multiple added value services like 5G/LTE Small Cell, public wifi, security cameras, EV charging, IoT sensors/gateways and even integrated audio for public communication. Our solution has the added benefit of being a resilient solution that can still provide lighting, surveillance and other functionality during grid outages through the integrated battery storage.

We can **use existing poles** in most cases because most of the services are integrated inside the Omniflow protective shell in the top so this transformation is much more economical avoiding expensive and time consuming civil works. To transform a simple old light into a smart pole you will only need to change the head of the unit.

Air Quality Monitoring

As cities expand and traffic congestion worsens, the combustion of fossil fuels in vehicles becomes a significant contributor to air pollution. To combat this challenge effectively, **accurate and real-time data on roadside air quality is indispensable.** This is where Omniflow's Air Quality Sensor steps in, providing a comprehensive solution for monitoring pollution caused by the combustion of fossil gases in traffic.

Smart Parking

Smart parking with Omniflow utilizes on the edge computer vision technologies, processing data locally for reduced data consumption and privacy protection. Control room operators can easily flag parking offenses like incorrect space occupation through the OmniConnect dashboard, and parking users can easily identify available parking spaces. This system benefits cities by **reducing congestion, improving air quality, and ensuring equitable parking access**. Private parking operators also gain from optimized space utilization and enhanced customer satisfaction.

Real-Time Occupancy

- spot by spot
- occupancy rates

Export data for API integration:

- displays
- external platform

Alerts for parking offenses like:

- no parking areas
- special parking spaces
- EV charger spaces occupied without use

Data storage up to 3 years

Omnibench

Omnibench is a smart urban furniture designed for public spaces and patented by Omniflow.

The contemporary design is inspired in the Omniled Smart Lamppost shape and can interact with this product with multiple optional features like, architectural lighting, USB or wireless charging points and electric bicycles docking stations.

The water tight bench can be opened and be used for other technical purposes like the installation of a camouflaged base station for a telecommunications provider or simply more batteries.

The Omnibench can be filled with sand/water or simply bolted to the ground.

Features

Modular Design
Solar Optional

IoT monitor and control

Dimensions

2.16/ 0.5 m (w x h)

Weight

50 Kg per module

Finishing

Marine grade gel coat

Color

RAL 9010

Space inside

Can fit 3 (three) objects up to:
500 x 500 mm
1.25 m (external radius)

Installation

Bolted to the ground
Filled with water
Filled with sand

Transportation

Package dimensions:
2.20 x 0.95 x 0.50 m
Up to 6 units stackable

Optional

Ingress Protection IP55

Impact Protection IK08

Mounting Mounts:
Bolted to the ground
Fill with water
Fill with sand

Transportation Package dimensions:
2.20m x 0.95m x 0.50m
Up to 6 units stackable

Optional Accessories IoT integration inside Body Shell for multi-application:
- Bottom lighting (bench)
- E-Bike Charging Station
- E-Scooter Charging Station
- USB Charger ports
- Wireless Charger
- Wifi Ethernet Router AP
- Wifi Ethernet Fiberoptic Router AP
- LoRA Gateway (under consultation)
- Transmission - 4G Modem, ethernet, fiber, P2P, P2MP
- Small Cell integration
(under consultation)

Warranty 2-year warranty, Extended EOL support option

Sustainable Smart City Solutions

Smart Pole

The Omniflow Smart Pole is a comprehensive solution that combines the core Smart Luminaire with additional integrated services and other options like outdoor display and EV charger, transforming traditional streetlights into smart, sustainable infrastructure. This solution allows cities to seamlessly transition urban infrastructure to the digital era.

5G base-stations (small cells)

5G or LTE small cells can be integrated within our products creating the perfect street level solution to deploy sustainable network infrastructure.

Radio and antennas can be integrated both on Omniled 07 and also on Omniflow Smart Bench.

EV Charging

The Omniflow Smart Luminaire with an integrated EV Charger offers a cost-effective, efficient solution to accelerate the transition to electric vehicles. Its primary advantage is leveraging existing cables and transformers, which are already equipped to handle the required power levels, thereby eliminating the need for additional infrastructure investments.

Pedestrian Crosswalk

We designed an intelligent crosswalk system to enhance pedestrian safety in areas with high vehicle and foot traffic. Using advanced technologies like sensors and smart signaling, this system improves safety and helps prevent accidents.

Bus Stop

Smart Bus Stop provides the users of public transportation of a better service experience improving safety, information, connectivity and comfort.

The pole integrates the Omniflow smart IoT pole powered by wind and solar that can host, light, information display, Wi-fi AP, Security camera and USB/wireless charging.

Smart Parking

The computer vision is capable of identifying if specific parking places are free or occupied. This information can be processed in the cloud or in the edge.

The metadata can be sent to display, app or directly to the car.

V2X

Events detected by computer vision will be transmitted C-V2X our using a RSU (road side unit) the information can be directly transmitted to the vehicles and pedestrians near the event.

Traffic Monitoring

The integrated IP cameras can be used to stream the video to a control center or video processing can be executed inside our unit to detect vehicles and events.

Edge Computing

Local processing is used to process the raw data coming from our sensors on our local computer. The system is also capable of processing low frame rate video analytics like smart parking. For more demanding applications a local GPU can be used for video analytics, data processing or content on the edge.

Micro Mobility

Our Omniled and Omnibench can be used to charge e-scooters, e-bikes or just parking.

All the electronics and control can be hosted inside of the Smart Bench solution that can also have additional solar power capability to reduce the power consumption from the grid.

Wi-fi Access Point

Public WI-FI access points can be hosted in all of Omniflow products.

Our solution is agnostic in terms of particular vendors used to provide the service.

All of our products are transparent to radio waves, so the AP can be installed inside our weather protective enclosure.

Security

Our systems can host up to 4 IP security cameras completely integrated into the shell of our Omniled solution. The integrated IP cameras can be used to stream the video to a control center or the video processing can be executed inside our unit using the camera processing capacities or edge computing.

Weather/ environmental/ IoT sensors

All this IoT sensors and gateways can be easily integrated in our units where we can offer the power, connectivity and space to host all this services.

Drone Charging/ control Hub

We can retrofit existing lamp posts with Omniflow smart pole powered by wind and solar using the existing poles and avoiding expensive and time consuming civil works.

Every Omniflow smart pole can be upgraded to host the drone charging pad and 5G, so with Omniflow you will be able to create sustainable networks and highways for autonomous drone services.

Smart urban lighting

Our solution achieves a power reduction of more than 90% transforming a simple street light into a carbon neutral object that can be used for multiple IoT purposes in a single infrastructure without the need of creating new ones.

We have 2 available models for smart lighting, the Omniled 07 for pole heights of 6-12m and the Omniled 035 for pole heights of 3-5m.

Rail Stations

By retrofitting old lights with highly efficient and beautifully designed Omniflow systems our customers are reaching savings of more than 90% translating into good investments and good ROI.

Information can be displayed on digital signage together with Wi-Fi, Audio and security cameras.

Parking lots

By retrofitting old lights with highly efficient and beautifully designed Omniflow systems our customers are reaching savings of more than 90% translating into good investments and good ROI.

Lights can be dimmed after closing time and motion sensor activated to help the security team to secure the perimeter. We also normally supply in this projects Wi-Fi and security cameras that can be also used for Smart Parking.

Beach/ Crowd monitoring

Omniflow's technology analyses how busy the beach or location is and shows real-time occupancy levels on a local E-ink screen or an app so a user can make an informed decision about where to go.

Audio warnings can also be used.
